
1 Finding
AI Slows the NeuralRx
Past the 1.2 ms Slack.
The NeuralRx Stays Busy
One Slot Longer, and the
Next Failed TB Is Dropped
83–99% of the Lost Recoveries
2 Model
A Formula Gives the
Share of Lost Recoveries
From the Run Time
of the NeuralRx
672 Runs, Error 0.82 Points
3 Design: Antiphase
NeuralRx Only on Failed TBs.
AI Stops Beside a
Running NeuralRx.
Large AI Units Stay Away
From Decoding Cells
6.4–7.5× the AI of a Fixed 10%
